neurodegenerative disorders

SEQ ID NO 430; 1754pp; English.

CC neurodegenerative disorders, or polypeptides comprising an amino acid CC sequence at least 95% identical to the new sequences. The polypeptides, and the controlled controlled controlled the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune CC disorders, inflammatory conditions (e.g. inflammatory bowel disease, ce phritis or Crohn's disease), respiratory disorders (e.g. asthma and CC enghritis or Crohn's disease), respiratory disorders (e.g. asthma and CC enghritis or crohn's disease), respiratory disorders (e.g. asthma and CC enghritis or controlling gene or Alzheimer's disease), and CC cardiovascular disorders (e.g. atherosclerosis or myocarditis). The CC polynucleotides are useful for chromosome identification, chromosome CC mapping, for controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therasp, for identifying individuals CC from minute biological samples, in forensic biology, and as hybridization controlling neural disorders (e.g. els, to raise antibodies, for testing biological activities, and for treating or preventing neural disorders, immune system disorders, creating or preventing neural disorders, immune system disorders, and for the sequence data for this patent did form part of the printed specification, but was obtained in electronic format directly from WIPO at first enumerces. The invention relates to 592 new human secreted polypeptides useful fo diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, or ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                        CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC complementary strand of a polynucleotide comprises or (b) a combination
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a function of
CC complementary strand of a polynucleotide which complementary to a
CC polynucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC constant of the primers are useful for synthesising polynucleotides,
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC chast seasily without any specialised methods. AAH03166 to AAH13628 and
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH3672 represent human acdid sequences; AAB92446 to AAH3628 and

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and represent human amino acid sequences; and AAH13639 to AAH13632 represent or proteins allow which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1729
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI; 2001-318749/34.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dr primer and an oligonucleotide complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (HELI-) HELIX RES INST

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
This invention relates to the novel association of protein sequences the genes which encode them) to the NF-kappaB pathway. The invention be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antiirheumatic, gastrointestinal-Gen, antiasthmatic, antiarthritic, antirheumatic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides useful for diagnosing, preventing, treating, or ameliorating conditio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammatory disorder; NF kappaB regulation; cancer; aberrant apop hepatic disorder; Hodgkin's lymphona; haematopoietic tumour; hyper-IgM syndrome; hypohidrotic ectodermal dysplasia; X-linked anhidrotic ectodermal dysplasia; immunodeficiency; viral infection; HIV-1; HTIV-1; hepatitis B; hepatitis C; EBV; inf viral replication; host cell survival, evasion of immune response; rheumatoid arthritis; inflammatory bowel disease; colitis; asthma;
                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotides and polypeptides associated with pathway, useful for diagnosing, treating, or preventing disorc diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                atherosclerosis; cachexia; euthyroid sick syndrome; stroke; EAE; autoimmune disorder; hyper immune activity; aberrant acute phase response, recongenital condition; birth defect; necrotic lesion; wound; organ transplant rejection; aberrant signal transduction; proliferating disorder; cancer; HIV propagation; gene; ds; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NF-kappaB pathway; antiinflammatory; cytostatic; hepatotropic; virucide; antiatthritic; antitheumatic; gastrointestinal-Gen; antiasthmatic; antinomatic; earchoroprotective; vasotropic; antiatteriosclerotic; immunomodulator; cerebroprotective; vasotropic; immunosuppressive; vulnerary; gene therapy; immune disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nadler SG,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-JAN-2003; 2003US-0440068P

cc immune diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder crelated to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, chepatic disorders Hodgkin's lymphomas, haematoppietic timours, hyper-IgM cc syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic cc ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1, cc hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell cc survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick cc syndrome, stroke, EAB, autoimmune disorders, disorders related to hyper cc immune activity, disorders related to aberrant acute phase responses, cc hypercongenital conditions, birth defects, necrotic lesions, wounds, corgan transplant rejection, conditions related to organ transplant cc rejection, disorders related to aberrant signal transduction, disorders related to aberrant signal transduction, conditions related to organ transplant cc proliferating disorders, cancers and HIV propagation in cells infected with other viruses. The present sequence is that of a human gene which is subject to the novel association with the NF-kappaB pathway of the invertion where the sequence is that of a human gene which is incompanied to invertion where the sequence is that the sequence is continued to invertical the sequence is that of a human gene which is invertical to the novel association with the NF-kappaB pathway of the invertical to the novel association with the NF-kappaB pathway of the sequence is t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

cc vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions cordiseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder, an inflammatory disorder, an inflammatory disorder an inflammatory disorder. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder an immune disorder, an inflammatory disorder. The patic disorders, hodgkin's lymphomas, haematopoietic tumours, hyper-IgM cordisers, hoggkin's lymphomas, wiral infections, HIV-1, HTLV-1, hepatitis C, EBV, influenza, viral replication, host cell convival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper immune activity, disorders related to aberrant acute phase responses, corgan transplant rejection, conditions related to organ transplant corgan transplant rejection, disorders related to aberrant signal transduction, infected with other viruses. The present sequence is that of a human gene which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the genes which encode them) to the NF-kappaB pathway. The invention be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antiheumatic, gastrointestinal-den, antiasthmatic, antiarteriosclerotic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hyper-IgM syndrome; hypohidrotic ectodermal dysplasia;
X-linked anhidrotic ectodermal dysplasia; immunodeficiency;
viral infection; HIV-1; HTIV-1; hepatitis B; hepatitis C; EBV; influenza
viral replication; host cell survival; evasion of immune response;
rheumatoid arthritis; inflammatory bowel disease; colitis; asthma;
atherosclerosis; cachexia; euthyroid sick syndrome; stroke; EAE;
autoimmune disorder; hyper immune activity;
aberrant acute phase response; hypercongenital condition; birth defect;
necrotic lesion; wound; organ transplant rejection;
aberrant signal transduction; proliferating disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to the novel association of protein sequences the genes which encode them) to the NF-kappaB pathway. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 217; 237pp; English.

SEQ ID

NO 497; Opp; English.

The present invention relates to novel DNA and protein sequences which CC are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of carcinoma; (vi) for inhibiting the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (cx) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma associated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent CX US2002182586A1, for which no sequence data was published

CC This invention relates to the novel association of protein sequences (and CC the genes which encode them) to the NF-kappaB pathway. The invention may CC be useful for the production of compounds with an antiinflammatory, CC cytostatic, hepatotropic, virucide, antiarthritic, antiinfumatic, CC gastrointestinal-Gen, antiasthmatic, antiarteriosclerotic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive or conseiul for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder crelated to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, CC hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM syndromes, hypohidrotic ectodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, X-linked anhidrotic cetodermal dysplasia, Y-linked anhidrotic survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cachexia, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hyper congenital conditions, birth defects, necrotic lesions, wounds, crejection, disorders related to aberrant signal transglant responses, for the province of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunosuppressive; vulnerary; gene therapy; immune disorder; inflammatory disorder; NF-kappaB regulation; cancer; aberrant apoptosis; hepatic disorder; Hodgkin's lymphoma; haematopoietic tumour; hyper-IgM syndrome; hypehidrotic ectodermal dysplasia; Y-linked anhidrotic ectodermal dysplasia; immunodeficiency; viral infection; HTV-1; HTLV-1; hepatitis B; hepatitis C; EBV; influenza; viral replication; host cell survival; evasion of immune response; rheumatoid arthritis; inflammatory bowel disease; colitis; asthma; atherosclerosis; cachexia; enthyroid sick syndrome; stroke; EAB; autoimmune disorder; hyper immune activity; aberrant acute phase response; hypercongenital condition; birth defect; necrotic lesion; wound; organ transplant rejection; aberrant signal transduction; proliferating disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NF-kappaB pathway; antiinflammatory; cytostatic; hepatotropic; virucide; antiarthritic; antirheumatic; gastrointestinal-Gen; antiasthmatic; antiarteriosclerotic; immunomodulator; cerebroprotective; vasotropic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma hasociated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published

RESULT 13
                                           sequence and an oligonuclectide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human cDNA sequences, AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                   length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Primer sets for synthesizing polynucleotides, particularly the 5602 ful length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          02-MAY-2000;

Crearesion, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and creating at least 8 amino acids of any of the 6808 amino acid sequences fully defined in the specification. The probe is a single exon probe that the hybridises under high stringency conditions to a nucleic acid molecule cardinates of the specification. The probe is a single exon probe that the hybridises under high stringency conditions to a nucleic acid molecule cardinates to the specification. The probe is a single exon probe that the hybridises under high stringency conditions to a nucleic acid molecule cardinates of the specification. The probe is a single exon probe cardinates of the plurality of probes is separately cardinates of the plurality of probes is separately and addressable set of single exon nucleic acid molecule exon microarray for measuring human gene expression, a method of measuring human gene expression, a method of measuring human gene expression, a method of contiguous amino acids of any of the above- mentioned amino acid sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing than gene expression data by subscription, and a computer-readable constitution, which contains a database having a plurality of records (each record including data on the expression of a single exon mrocarrays. Created above, methods and apparatus are useful in gene expression, or in contains and attabase of selling exon probe cated as tools for surveying the probes are used in identifying and characterising gross calleration, the probes are used in identifying and characterising gross allerations in the genomic locus that includes their exon, in assessing selling exon probe of the invention. Note: The sequence is a human cardinated in electronic format direc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                        The present invention relates to novel DNA and protein sequences which care associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining carcinoma or a propensity to carcinoma; and (xi) for capable of capable on the CAP are useful as DNA vaccines and the CAP are useful as markers of sequence. Note: This patent is an equivalent to basic patent CA coding US2002182586A1, for which no sequence data was published
                                                                                Query Match

RESULT 16
ACN44177
The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
                                                                                                                                                                                                                   Recombinant nucleic acid useful for diagnosis comprises a nucleotide sequence.
                                                                                                                                                                  Claim 1; SEQ ID NO 494; Opp; English.

In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA gene sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2087 BP; 556 A; 487 C; 508 G; 536 T; 0 U; 0 Other;

                                                                                                                                                                 S
                                                                                                                                                                                                                                                                         CC length cDNAs defined in the specification. Where a primer set comprises:

(C (a) an oligo-dT primer and an Oligonucleotide complementary to the

CC complementary strand of a polynucleotide which comprises one of the 5602

CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination

CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination

CC of an oligonucleotide comprising a sequence complementary to the

CC complementary strand of a polynucleotide which comprises a 5'-end

CC sequence and an oligonucleotide comprising a sequence complementary to a

CC polynucleotide comprises at least 15 nucleotides and the combination of

CC the 5'-end sequence/3'-end sequence is selected from those defined in the

CC polynucleotide number sets can be used in antisense therapy and in

CC place therapy. The primers are useful for synthesising polynucleotides,

CC particularly full-length cDNAs. The primers are also useful for the

CC particularly without any specialised methods. AAH03166 to AAH13628 and

CC DNAs easily without any specialised methods. AAH03166 to AAH13628 and

CC DAH13633 to AAH19742 represent human cDNA sequences; ABB92446 to AAH3632 represent

CC oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                   Query Match

Yamamoto J,
                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% or 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosts, neurological diseases, Alzheimer's diseases, Parkinson's diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ss; gene; osteopathic; neuroprotective; nootropic; antiparkinsonian; cytostatic; gene therapy; diagnostic marker; morbid state; osteoporosis; neurological disease; Alzheimer's disease; Parkinson's disease; dementia;

CC ADC3089) and the polypeptides they encode (ADC30890-ADC3080). The Crivention also relates to nucleic acid sequences over 99% identical with Cthe novel human cDNAs. The invention additionally encompasses expression convectors and host cells comprising a nucleic acid of the invention; the crecombinant production of a polypeptide of the invention; an antibody consists a polypeptide of the invention; an antibody constitution further discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes convention; methods for the invention of compounds that modulate the convention; methods for the polynucleotide probes convention; methods for the polynucleotide and/or monoclonal antibodies for carrying out the methods of the expression or activity of the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the CDNA sequences of the invention convention for mucleic acids and polypeptides of the invention are constituted in diagnostics, drug screening, forensics, gene mapping, in the contification of mutations responsible for genetic disorders or other creating biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are calso used for treating diseases such as Parkinson's diseases or cancer. The nucleic acids may also be used as hybridisation probes or concers, and in the recombinant production of a protein. The polypeptides care also useful in generating antibodies, as molecular weight markers, can and as food supplements. The present sequence represents a specifically collaboration and electronic format directly from WIPO at the sequence data for this patent did not form part of the printed specification, but was considered in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide concerns in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon mucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited above, an ORF-encoded peptide comprising the single exon probe cited antibody that binds specifically to a peptide cited above, an isolated antibody that binds specifically to a peptide cited above, and a conjunction of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cited above. The probe, methods and apparatus are useful in generations are useful in generations. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-encoded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030194704

```
The present invention relates to a new polypeptide (NOVX). The NOVX polypeptide, nucleic acid and antibody are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX nucleic acids, preferably a NOVX-associated disorder. The NOVX nucleic acids, or diagnosing diseases such as cancers, Hodgkin disease, Von Hippel-Lindau syndrome, Alzheimer's disease, stroke, tuberous sclerosis, erebral palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxia-telangicctasia, leukodystrophies, addiction, anxiety, depression, pain, infertiity, inflammatory bowel disease, inflammatory bowel disease, infertiity, inflammatory bowel disease, atherosclerosis, hypertension, sclerosity, inflammatory bowel disease, asthma, arthritis, immunodeficiencies, HIV, viral, bacterial or parasitic infections, or graft-versus-bost disease. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, wound healing and

The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present nucleic acid sequence encodes a human NOVJ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated human secreted protein (SECP) polypeptide from 63 fully defined protein sequences given in the specification. The polypeptide is useful for the diagnosing/treating of a disease with decreased/overexpression of SECP. Examples of disorders associated with abnormal expression of SECP include a cell proliferative disorder e.g. arteriosclerosis, cancers; autoimmune/inflammatory disorder, ALDS, allergies, anaemia, asthma; cardiovascular disease e.g. congestive heart failure, ischaemic heart disease; developmental disorder e.g. renal tubular acidosis, hypothyroidism; neurological disorder e.g. Alzheimer's disease, dementia, Parkinson's disease, epilepsy or stroke. The SECP polymucleotide and polypeptide are further useful for analysing the proteome of a tissue or a cell type. The polymucleotide is useful for creating knockin humanised animals (pigs) or transgenic animals (mice or rats) to model human disease, and for somatic or germline gene therapy, and for the polymucleotide is useful for creating knockin humanised animals (pigs) or transgenic animals (mice or protein the polymucleotide is useful for creating knockin humanised animals (pigs) or transgenic animals (mice or protein the polymucleotide is useful for creating knockin humanised animals (pigs) or transgenic animals (mice or protein the polymucleotide is useful for creating the polymucleotide is useful for creating the protein for analysing the protein for ana

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID No:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; or (c) a sequence
                                                                                                                                                                                                                                         New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cances
                                                                                                                                                                                                          Claim 1; SEQ ID NO 2473; 5504pp; English.

                                             CC comprising the above polypeptide fused to a heterologous polypeptide; (6) CC an isolated antibody that binds to the above polypeptide; (7) a process CC for producing the antibody; (8) an isolated oligopeptide; (7) a process CC the above polypeptide; (9) a tumour associated antigenic target (TAT) CC binding organic molecule that binds to the above polypeptide; (10) a CC composition of matter comprising the above (chimeric) polypeptide; (10) a CC composition of matter comprising the above polypeptide; (10) a CC composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of the composition of matter contained within the container; (12) methods of cinhibiting the growth of a cell that expresses the above protein, where CC therefore, the above protein in a part dependent upon a growth of the coll is at least in part dependent upon a growth of the above protein; (13) a method of determining the protein of a sample suspected of containing the protein of a sample suspected of containing the protein of a sample suspected of containing the protein of discribed above; (15) methods of diagnosing the presence of a protein; and (17) a method of reacting or preventing a cell proliferative disorder associated with increased expression or activity of the above protein; and (17) a method of binding an antibody, oligopeptide or corganic molecule to a cell that expresses the protein described above. CC The TAT sequences have cytostatic activities, and can be used in gene ct therapy. The composition and methods are useful for diagnosing, cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer. The present sequence represents a cell proliferative disorder or cancer.

                      CC sequences (see SEQ ID NO:1 to 4622); (a) the full-length coding region of CC (a); (c) the complement of (a) cor (b) d) a sequence that has 80% CC (c). Also described: (1) an expression vector comprising the above CC (c). Also described: (1) an expression vector comprising the above CC (c). Also described: (1) an expression vector comprising the above cC (c) a process for producing a polypeptide; (4) an isolated polypeptide coding region of the above encoded by any of the above comprising the above polypeptide coding region of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-cC length coding region of the above nucleotide sequence; or (c) a sequence comprising the above polypeptide fused to a heterologous polypeptide; (6) an isolated antibody that binds to the above polypeptide; (6) cr producing the antibody; (8) an isolated onligentic target (TAT) composition of matter comprising the above polypeptide; (10) a ccomposition of matter comprising the above polypeptide; (11) a ccomposition of matter contained within the container; (12) methods of the growth of a cell that expresses the above protein, where contained protein in a sample suspected of containing the protein contained above; (15) methods of diagnosing the presence of a protein in a sample suspected of containing the protein contained above; (15) methods of diagnosing the presence of a tumour in a containing and (17) a method of binding an antibody, oligopeptide or contained within containing the protein contained above. CC protein, and (17) a method of binding an antibody, oligopeptide or contained within the containing the protein contained above. CC protein, and (17) a method of binding an antibody, oligopeptide or containing the protein as contained and method of activity of the above contained and method of determining the protein contained and method of binding an antibody, oligopeptide or containing the protein as contained and cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     scleroderma, haemophilia, diabetes, pancreatitis, autoimmune disease, asthma, arthritis, immunodeficiencies, HIV, viral, bacterial or parasitic infections, or graft-versue-host disease. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haemopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosme manning times.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           syndrome, Alzheimer's disease, stroke, tuberous sclerosis, hypercalcaemia, Parkinson's disease, Huntington's disease, cerebral palsy, epilepsy, Lesch-Nyhan syndrome, multiple sclerosis, ataxiatelangiectasia, leukodystrophies, addiction, anxiety, depression, pain, telangiectasia, leukodystrophies, addiction, anxiety, depression, pain, telangiectasia, belake, osteoporosis, inflammatory bowel disease, infertility, inflammatory bowel disease, infertility, inflammatory bowel disease, sterosclerosis, hypertension, scleroderma, haemophilia, diabetes, pancreatitis, autoimmune disease, scleroderma, haemophilia, diabetes, pancreatitis, autoimmune disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a new polypeptide (NOVX). The NOVX polypeptide, nucleic acid and antibody are useful in the manufacture of medicament for treating a syndrome associated with a human disease, preferrably a NOVX-associated disorder. The NOVX nucleic acids, polypeptides and antibodies are useful for treating, preventing or polypeptides and antibodies are useful for treating, preventing or diseases such as cancers, Hodgkin disease. Von Hippel-Lindau disease, and antibodies are useful for treating preventing or polypeptides and antibodies are useful for treating.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. diabetes, sclerosis, atherosclerosis, cancer, infections, osteoporosis or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; secreted protein; gene; ss; nutritional supplement; haemophilia; viral infection; bacterial infection; fungal infection; diabetes; asthma autoimmune disorder; rheumatoid arthritis; multiple sclerosis; tumour; autoimmune thyroiditis; allergic reaction; neurodegenerative disease; Alzheimer's disease; Parkinson's disease; liver fibrosis; cancer; ulcer coagulation disorder; inflammatory disorder; Crohn's disease; incision; tissue regeneration; wound healing; burn; haematopoiesis; myeloid cell deficiency; lymphoid cell deficiency.
                      proteins. The polynucleotides can be used as probes for the identification and isolation of full length cDNA and genomic DNA. The polynucleotides and proteins can also be used as nutritional supplements polynucleotides and proteins can also be used as nutritional supplements. The proteins are useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal and disorders such as viral infections, bacterial infections, fungal

They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoiesis and for treating myeloid or lymphoid cell deficiencies.

                                                                                                                                                                                       Ś
                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                        The invention relates to human secreted polypeptides designated LP095, LP219, LP217, LP220, LP221, LP222, LP229, LP237 or LP338 and nucleic acid molecules encoding such polypeptides. Novel secreted proteins of the invention are used for treating diseases such as atherosclerosis, atheroscierosis, retinopathy, psoriasis, pancreatitis, attributed immunodeficiency, ischaemia, carcinomas, haemolytic anaemia, reperitusion injury, neoplasms and cancer especially liver cancer. They are also used for wound healing. Polymucleotides of the invention can be used to generate transgenic animals or knock out animals, which in turn, are useful in the development and screening of therapeutically useful reagents for use in the treatment of diseases associated with LP polypeptide associated activity. They are also used in gene therapy. The present sequence is human LP237 secreted protein encoding cDNA
                                                                                                                                                                                                                                                                             Query Match

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The
                                                                                                                                                                                                                                                    New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   12-SEP-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200270539-A2
